Web Storage API

[< Previous](#) [Next >](#)

The Web Storage API is a simple syntax for storing and retrieving data in the browser. It is very easy to use:

Example

```
localStorage.setItem("name", "John Doe");
localStorage.getItem("name");
```

[Try it Yourself »](#)

The Web Storage API is supported in all browsers:

				
Chrome	IE/Edge	Firefox	Safari	Opera

The setItem() Method

The localStorage.setItem() method stores a data item in a storage.

It takes a name and a value as parameters:

Example

```
localStorage.setItem("name", "John Doe");
```

The getItem() Method

The localStorage.getItem() method retrieves a data item from the storage.

It takes a name as parameter:

Example

```
localStorage.getItem("name");
```

JS Reference

The sessionStorage Object

The `sessionStorage` object is identical to the `localStorage` object.

The difference is that the `sessionStorage` object stores data for one session.

The data is deleted when the browser is closed.

Example

```
sessionStorage.getItem("name");
```

Try it Yourself »

The setItem() Method

The `sessionStorage.setItem()` method stores a data item in a storage.

It takes a name and a value as parameters:

Example

```
sessionStorage.setItem("name", "John Doe");
```

The getItem() Method

The `sessionStorage.getItem()` method retrieves a data item from the storage.

It takes a name as parameter:

Example

```
sessionStorage.getItem("name");
```

Storage Object Properties and Methods

Property/Method	Description
<code>key(n)</code>	Returns the name of the <i>n</i> th key in the storage
<code>length</code>	Returns the number of data items stored in the Storage object
<code>getItem(keyname)</code>	Returns the value of the specified key name
<code>setItem(keyname, value)</code>	Adds a key to the storage, or updates a key value (if it already exists)
<code>removeItem(keyname)</code>	Removes that key from the storage
<code>clear()</code>	Empty all key out of the storage
